

IDEA PROPOSAL · ROUND 1

# Paytm Hisaab

Every rupee, on your side.

---

An AI teammate that explains a merchant's money  
when a freeze or a tax notice hits.

Track 3: Autonomous AI Teammates · Paytm Build for India AI Hackathon, Bengaluru

Built on n8n · Sarvam AI · Cognee

## Small merchants can't explain their own UPI money

---

### Every rupee is traceable

10M+ businesses take UPI on a Paytm QR

### Authorities read the trail

Police freeze accounts.  
Tax offices send notices.

### Merchants can't answer

No record of what each payment was for

The result: **frozen accounts, wrong tax bills, and shops going back to cash.**

## One payment can freeze a whole shop

---

**₹4,200**

the disputed payment

**339**

payments that week

**100%**

of the account frozen

They sold onions to a customer three hops from a fraud. They aren't even named in the FIR.

**The bank**  
has no bill

**The police officer**  
is in another state

**The merchant**  
can't find the payment

**Nobody can say which payment it was, or what it paid for.**

## Two authorities now demand an answer

---

### Cyber-crime freezes

MHA and I4C SOP, January 2026

- Freeze only the disputed amount
- Tell mules apart from genuine sellers
- Release small sums once the trail is verified

Andhra Pradesh and Rajasthan High Courts ruled the same way in 2026.

### GST notices

Haveri, Karnataka, 2025

# ₹29 lakh

demanded from a vegetable seller whose sales were tax-exempt

Similar notices are still going out in 2026.

Both ask one question: **what was each rupee, actually?**

## One ledger, two answers

It never guesses: **at most 3 questions a day**, one tap each, in their own language.

## The teammate works each case end to end

---

### Every night

- 1 Labels new payments
- 2 Asks up to 3 questions
- 3 Warns before the GST limit

### Account frozen

- 1 Finds the one payment
- 2 Builds the evidence
- 3 Drafts the grievance

### Tax notice

- 1 Reads the notice
- 2 Rebuilds real turnover
- 3 Explains it to their CA

**Hands to a human** when evidence is weak, the amount is large, or they dispute a label.  
**Nothing is sent without a Paytm officer's approval.**

## A teammate, not a chatbot

---

It understands, decides, acts, and knows when to hand over

### Understands context

Remembers each shop

### Makes decisions

Picks 1 payment out of 339

### Takes actions

Builds packs, drafts grievances

### Works with humans

They confirm, an officer approves

### Escalates wisely

Only weak or large cases

### Measurable outcomes

Days to release, merchants kept

## A record nobody can fake later

---

- ✓ Append-only and hash-chained
- ✓ A daily fingerprint anchored outside Paytm
- ✓ Their answers never overwrite the AI's label
- ✓ No one can backdate a history

### Every line of the pack is graded

**1 Backed by a bill**

**2 Derived by a rule**

**3 Their answer when asked**

**4 Added after the notice**

Real shops: mostly 1 and 2. Fakes: mostly 3 and 4.

**We sort. We don't advocate.**

# Architecture

Every step is an n8n node you can open and inspect. **Only a person sends anything out.**

## Built on n8n, Sarvam AI and Cognition

### n8n

runs every workflow

### Sarvam AI

LLM in their language

### Cognition

remembers each shop

### Python + FastAPI

does all the maths

### PostgreSQL

the tamper-evident ledger

### WhatsApp

where they already are

AI proposes

Python calculates

Ledger records

A person approves

# Why only Paytm can do this

---

## 1 On the rail

Sees every payment the moment it moves  
Khatabook, Vyapar and ClearTax work after the fact

## 2 Two authorities, one engine

Police and tax answered from one ledger  
Other tools do one or the other

## 3 Can't be faked later

Tamper-evident, anchored outside Paytm  
A mule can't backdate a clean history

## 4 Already the channel

Paytm already answers banks and police  
They confirm; Paytm responds in time

**Why now:** the 2026 SOP made telling a shopkeeper from a mule a legal duty.

## Everyone in the loop wins

---

**10M+**

businesses on a Paytm  
business QR could use it

### **Merchant**

Keeps trading: only the disputed amount is held

### **Paytm**

Keeps the GMV, the Soundbox and the loans

### **Banks, police**

Get a verified trail they can act on

### **UPI economy**

Fewer "No UPI, cash only" signs

We measure: days to release · balance kept usable · merchants still active after 30 days

## Business model

---

### Retention

Paytm pays

Frozen merchants stay and keep transacting

### Hisaab Pro

Merchant pays

A monthly add-on to their Soundbox plan

### Credit

Lenders pay

Documented turnover unlocks loans

### Verification

Banks pay

Checks whether a receiver is a genuine seller

**Never charged: getting your own money released.**

# What we will build at the hackathon

## Lines we won't cross

Never claims innocence

Nothing sent unapproved

Never helps dodge tax

**Paytm Hisaab** every rupee, on your side.
